They show how archaeology can be used to reveal the position of trenches, dugouts and other battlefield features and to rediscover what life on the Western Front was really like. And they show how individual soldiers are themselves part of the story, for forensic investigation of the war dead is now so highly developed that individuals can be identified and their fate discovered.

Digging the Trenches: The Archaeology of the Western Front. Andy Robertshaw, David Kenyon. Pen and Sword, £25.00, 207pp ills throughout, notes, index. ISBN 184415671-0. Since I have frequently been guilty of criticising the quality of Pen and Sword books, I feel bound to note that, quite apart from its fascinating content, this is the company's best quality book for a long time.

Digging the Trenches: The Archaeology of the Western Front ...
The authors explain that the trenches often had different uses throughout their existence. Some were also heavily shelled, further complicating the archaeology of the trenches. The difficulty in piecing together the history of a trench is explained in terms that can be easily understood.

In archaeology, excavation is the exposure, processing and recording of archaeological remains. An excavation site or "dig" is the area being studied. These locations range from one to several areas at a time during a project and can be conducted over a few weeks to several years. Excavation involves the recovery of several types of data from a site. This data includes artifacts, features, ecofacts, and archaeological context. Before excavating, the presence or absence of archaeological remains

Archaeological excavation - Wikipedia
This week, the news broke that archaeologists have re-discovered a system of World War One trenches on the Isle of Sheppey, an island just off the coast of North Kent, that had been totally forgotten. What's remarkable about these trenches is that they were dug in preparation for a German invasion.

Before digging the trenches, a magnetometer (detector) attached to an all-terrain utility vehicle will be used to scan the area. We will be excavating the soil to look for archaeological features and we will replace the soil once the excavations are completed. Noise level will be comparable to that of farm machinery, such as a tractor.

This comprehensive, illustrated survey of the latest in battlefield archaeology reveals "intimate insight into the realities of life" during WWI (Current Archaeology). Modern methods of archaeological, historical, and forensic research have transformed our understanding of the Great War. In Digging the Trenches, battlefield archaeologists Andrew Robertshaw and David Kenyon introduce the reader to this exciting new field and explore many of the remarkable projects that have been undertaken. Robertshaw and Kenyon show how archaeology can be used to reveal the positions of trenches, dugouts and other battlefield features, as well as what life on the Western Front was really like. They also show how individual soldiers are coming into focus as forensic investigation is so highly developed that individuals can be identified and their fates discovered. "An excellent introduction to the subject...Digging the Trenches is essential reading."—Gary Sheffield, Military Illustrated "What a splendid book this is."—Neil Faulkner, Current Archaeology

Tired of the airbrushed images of archaeologists in TV documentaries? Want the dirt on what REALLY happens on a dig? Paul Bahn has collected dozens of fun tales from the trenches to illuminate what actually occurs when archaeologists go into the field. He reveals startling episodes with dangerous situations, other dangerous archaeologists (sometimes unclothed), dangerous animals large and small, and cans of beer large and small. The stories that don't appear in the official reports have made their way into this small, humorous volume. Includes cartoons by noted illustrator Bill Tidy.

In this volume, Tony Pollard and Neil Oliver visit the sites of six major British battles, from Shrewsbury to Culloden, and carry out a full archaeological investigation at each. As they uncover artefacts abandoned in the heat and chaos of battle they closely follow the progress of each engagement and answer key historical questions, sometimes totally revising the accepted version of events. Each chapter is a fully framed investigation and follows an episode of the BBC television series. By using archaeology to unlock the secrets of the past, Tony and Neil prove that soldiers do not pass through fields of conflict like shadows, and in the process they show that battlefields are some of our most important national monuments.

Time Team is Channel 4's perennially popular archaeology show - and the experts are ready to share their archaeological know-how with us. So many of us watch the show and wish that we, too, could get out there, get digging and uncover an artefact such as a piece of pottery, glass, brooch or pipe stem. Now we can! The Time Team Dig Book explains all the key skills the budding archaeologist needs to know. From gaining permission for your dig and surveying the landscape, to locating and excavating your first trench; from identifying pottery, to your final report and the legacy of your dig. Taking us on a tour of some of their latest key excavation sites, Tony, Mick, Phil and the gang share with us their wealth of expertise and tell us all we need to know in order to join in.

John Joseph Steward fought in the Great War, from the Battle of the Somme to the final offensives of 1918, and he was an acute, unflinching observer of the conflict he took part in - of life and death on the Western Front. He was a writer, too. He recorded his experiences in accurate detail and later in life he wrote a graphic fictionalized account of his wartime career - the story of his war, his comrades and his platoon. His narrative is published here for the first time, edited, annotated and with an introduction by Andrew Robertshaw and Steve Roberts. Their research into Stewards story is a fascinating example of how such work can be used to give a vivid insight into the experiences of a Great War ancestor. About the EditorsAndrew Robertshaw is Curator/Manager of The Royal Logistic Corps Museum in Deepcut, Surrey. For the past twelve years he has been coordinating a group conducting an archaeological dig of British trenches and other sites on the Somme. He frequently appears on television as a commentator on battlefield archaeology and the soldier in history. His publications include A Soldiers Life, The Somme 1st July 1916, Digging the Trenches (with David Kenyon) and Ghosts of the Somme (with Alastair Fraser and Steve Roberts).Steve Roberts is a retired police officer and an ex-regular soldier. He has a keen interest in military history and as a result of his grandfathers service a particular passion for the Great War. He specializes in researching the individuals who served during the period and has worked in this field on a number of television projects. He is a founder member of the Great War archaeology group No Mans Land and also a battlefield guide regularly taking groups to France and Belgium. He has previously co-authored Ghosts on the Somme (with Alastair Fraser and Andrew Robertshaw)

This fully updated and revised edition of the best-selling title The Archaeology Coursebook is a guide for students studying archaeology for the first time. Including new methods and key studies in this fourth edition, it provides pre-university students and teachers, as well as undergraduates and enthusiasts, with the skills and technical concepts necessary to grasp the subject. The Archaeology Coursebook: introduces the most commonly examined archaeological methods, concepts and themes, and provides the necessary skills to understand them explains how to interpret the material students may meet in examinations supports study with key studies, key sites, key terms, tasks and skills development illustrates concepts and commentary with over 400 photos and drawings of excavation sites, methodology and processes, tools and equipment provides an overview of human evolution and social development with a particular focus upon European prehistory. Reflecting changes in archaeological practice and with new key studies, methods, examples, boxes, photographs and diagrams, this is definitely a book no archaeology student should be without.

This updated edition of a textbook universally hailed as an indispensable guide, is a complete introduction to the methods and means of forensic archaeology. Incorporating new advances in the field, new case studies, and charting the growth and development of the subject, Forensic Archaeology examines the four main fields of recovery, search, skeletal analysis and analytical science, and how the concepts and methods of traditional archaeology can be utilized within criminal investigations. The authors provide in-depth chapters that discuss: search and location the various constraints and issues posed by an increasingly complex legal environment the archaeology of individual and mass graves how the subject has evolved to include international investigations of human rights links with forensic anthropology forensic geophysical survey. This is an invaluable resource that will provide students, researchers, academics and the general reader alike with a fascinating introduction to this complex and crucial subject.

The definitive work on church archaeology.

"In 1925 a team of archaeologists was sent by famed archaeologist James Henry Breasted, the Director of the Oriental Institute of the University of Chicago, to search for the city that King Solomon built in the tenth century BCE. These excavations are rightfully famous for the light they shed on one of the most important cities in biblical times: the ancient city of Megiddo, in Israel, the site of Armageddon. The books and articles that the original participants published are still used, and debated, by archaeologists working in the region today. However, these scholarly publications provide only a small window into the daily activities of the team members and the stories behind their amazing discoveries. Using a treasure trove of other writing - including more than three decades' worth of letters, cablegrams, cards, and diaries, archaeologist and historian Eric Cline, who spent twenty years digging at Megiddo himself, brings the Chicago excavators and their discoveries to life situating them against the backdrop of the Great Depression in the United States as well as the growing troubles and tensions in British Mandate Palestine. Their story, as recounted by Cline, often reads more like melodrama than dry archaeological report and provides a unique a glimpse of the internal workings of a dig in the early years of biblical archaeology. In the course of telling their story, Cline gives readers the full picture of an archaeological site from its first discoveries to its most recent excavations placing it all in the larger scheme of the rise and fall of civilizations, from the Neolithic Revolution through the Romans"--

This volume is an archaeological exploration of the conflict landscapes encountered by volunteers of the International Brigades in the Spanish Civil War (1936-39). This research draws, not only on the techniques of landscape archaeology, but also on the writings of international volunteers in Spain – in particular, George Orwell.
