and treatment is limited to a maximum stone burden of around 2.5 cm as the ureter has a limited capacity to discharge stone fragments. A further limitation is the potential for severe acute renal ...

A detailed history of the Dornier aircraft manufacturers. From their early years through the war years and beyond. Specifications on performance, dimensions, weights, engines, armament, prototypes, first flights and other relevant details.

The Do 217 had a much larger bomb load capacity and had considerably greater range than the Do 17, which it replaced in frontline service from mid to late 1941. Although initially used simply as a bomber, later variants were developed to allow the Do 217 to undertake the precision maritime strike role. In order to perform the latter mission, the Do 217 was modified to launch glide bombs - units employing these pioneering weapons enjoyed some success in the Mediterranean from the autumn of 1943. During the course of these operations the Do 217 became the first aircraft in military aviation history to deploy a precision-guided bomb in combat in the form of the 'Fritz X' radio-guided, free-fall weapon, which sank the Italian battleship Roma shortly after Italy capitulated in September 1943. The Do 217 served on all fronts, and was often used on anti-shipping strikes during the Battle of the Atlantic and against the Allied invasion fleet at Normandy. This versatile aircraft was also converted into a nightfighter, seeing action in the Defense of the Reich through to war's end. This highly illustrated study explores the design and development of the Do 217 and chronicles its use in the frontline as a strategic bomber, launch platform for first generation precision weapons, reconnaissance aircraft and nightfighter, among others.

Traces the development of Germany's Dornier 217, recounts its role in World War II, and includes technical specifications and descriptions

A 2018 FINALIST FOR THE PULITZER PRIZE The chilling, little-known story of the rise of Nazism in Los Angeles, and the Jewish leaders and spies they recruited who stopped it. No American city was more important to the Nazis than Los Angeles, home to Hollywood, the greatest propaganda machine in the world. The Nazis plotted to kill the city's Jews and to sabotage the nation's military installations: plans existed for hanging twenty prominent Hollywood figures such as Al Jolson, Charlie Chaplin, and Samuel Goldwyn; for driving through Boyle Heights and machine-gunning as many Jews as possible; and for blowing up defense installations and seizing munitions from National Guard armories along the Pacific Coast. U.S. law enforcement agencies were not paying close attention--preferring to monitor Reds rather than Nazis--and only Leon Lewis and his daring ring of spies stood in the way. From 1933 until the end of World War II, attorney Leon Lewis, the man Nazis would come to call "the most dangerous Jew in Los Angeles," ran a spy operation comprised of military veterans and their wives who infiltrated every Nazi and fascist group in Los Angeles. Often rising to leadership positions, this daring ring of spies uncovered and foiled the Nazi's disturbing plans for death and destruction. Featuring a large cast of Nazis, undercover agents, and colorful supporting players, Hitler in Los Angeles, by acclaimed historian Steven J. Ross, tells the story of Lewis's daring spy network in a time when hate groups had moved from the margins to the mainstream.

Virtually nothing much is known about Focke-Wulf Flugzeugbau's design genius Hans Multhopp's outline for a twin ramjet-powered two man piloted bomber. Interesting details provided by Dr David Myhra and you will enjoy these beautiful color images of the two-man bomber created by artist Jozef Gatial of what Heir Multhopp was thinking regarding the future of aircraft design. Enjoy!

The first B-29 flew over Tokyo on 1 November 1944. It was a photographic reconnaissance aircraft ironically named 'Tokyo Rose'. The Ki.44 fighters of the 47th Sentai took off to intercept it but as it turned out the Superfortress flew at such an altitude and speed that they could not reach it. The Ki-44-II-Otsu had been specifically designed for this type of interception and could reach the astonishing rate of climb of 5,000 m in four minutes; however it was not good enough. During the following ten months, a devastating bombing campaign of thousands of Superfortress destroyed 67 Japanese cities and half of Tokyo. The cultural shock and the political consequences were huge, when it was realised that the Japanese industry was not able to produce the specially heat and stress-resistant metallic alloys that were required to manufacture the turbo superchargers needed by the fighters in charge of defending the Japanese mainland. They lacked the essential chromium and molybdenum metals to harden the steel. This fact thwarted the manufacturing of numerous advanced projects of both conventional fighters and those derived from the transfer of German technology fitted with turbojets and rocket engines. They are thoroughly described in this book.

This book provides a complete history of the clandestine WW II Luftwaffe and its origins under the patronage of Lufthansa, secret training of its personnel in Russia and Italy. Combat proving of its airplanes with the Condor Legion during the Spanish Civil War. Units, deployments, personel, airplanes and sub-types, thw 'secret weapons' and the world's first combat jets. Hitler's less than cordial relations with Goring, the RLM and German Aviation industry

In February 2016 the RAF's Search and Rescue Force (SARF) celebrated its 75th anniversary. In June that year the world-renowned and universally admired service was officially disbanded, despite attempts from many, including HRH Prince William, to save it as part of the RAF. This book is an official, fully illustrated, in-depth account of the SARF's rich and glorious history, from its origins in World War II through to its recent withdrawal. The book contains a foreword by HRH Prince William himself, plus action-packed and awe-inspiring photographs from the RAF's archive of photographs and exclusive interviews with former crewmembers, telling their own dramatic stories of derring-do. Officially endorsed by the RAF, An Illustrated History of the RAF Search and Rescue Force is the first, and probably the only, major book of its kind written on this subject. It is an essential purchase for anyone with an interest in military history, British history, the Royal Family and those who love stories of extreme and daring rescue missions.
