Founders believed in debating ideas, not banning them

As we celebrate this July Fourth week while still tentatively emerging from the worst throes of the COVID-19 outbreak, it's hard not to feel the weight of this year's challenges.

The United States is known as a "melting pot" yet this mix tends to be volatile and contributes to a long history of oppression, racism, and bigotry. Emerging Intersections, an anthology of ten previously unpublished essays, looks at the problems of inequality and oppression from new angles and promotes intersectionality as an interpretive tool that can be utilized to better understand the ways in which race, class, gender, ethnicity, and other dimensions of difference shape our lives today. The book showcases innovative contributions that expand our understanding of how inequality affects people of color, demonstrates the ways public policies reinforce existing systems of inequality, and shows how research and teaching using an intersectional perspective compels scholars to become agents of change within institutions. By offering practical applications for using intersectional knowledge, Emerging Intersections will help bring us one step closer to achieving positive institutional change and social justice.

Sociological literature tends to view the social categories of race, class and gender as distinct and has avoided discussing how multiple intersections inform and contribute to experiences of injustice and inequity. This limited focus is clearly inadequate. Systemic Crises of Global Climate Change is an edited volume of 49 international, interdisciplinary contributions addressing global climate change (GCC) by intentionally engaging with the issues of race, gender, and class through an intersectional lens. The volume challenges and inspires readers to foster new theoretical and practical linkages and think beyond the traditional, and oftentimes reductionist, environmental science frame by examining issues within their turbulent political, cultural, and personal landscapes. Varied media and writing styles invite students and educators to reflexively engage different, yet complementary, approaches to GCC analysis and interpretation, mirroring the disparate voices and viewpoints within the field. The second volume, Emergent Possibilities for Sustainability will take a similar approach but will examine the possibilities for solutions, as in the quest for global sustainability. This book is a valuable resource for academics, researchers and both undergraduate and post-graduate students in the areas of Environmental Studies, Climate Change, Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC.

Timely, relevant and extremely student-friendly, Andersen/Hill Collins' RACE, CLASS, AND GENDER: INTERSECTIONS AND INEQUALITIES, 10th edition, equips you with a multidimensional perspective on today's social issues. Written by two leading authorities in the field, this classic anthology uses a diverse collection of writings by a variety of scholars to demonstrate how the complex intersection of people's race, class, gender and sexuality shapes their experiences in U.S. society. Professors Andersen and Hill Collins begin each section with in-depth introductions to provide an analytical framework for understanding social inequality. Completely up-to-date, the readings cover current--and often controversial topics--including undocumented students, myths about immigrant crime, growing inequality, the role of social media in social movement mobilization, health care inequality and more.

This volume focuses on intersections of race, class, gender, and nation in the formation of the fin-de-siècle Spanish and Spanish colonial subject. Despite the wealth of research produced on gender, social class, race, and national identity few studies have focused on how these categories interacted, frequently operating simultaneously to reveal contexts in which dominated groups were dominating and vice versa. Such revelations call into question metanarratives about the exploitation of one group by another and bring to light interlocking systems of identity formation, and consequently oppression, that are difficult to disentangle. The authors included here study this dynamic in a variety of genres and venues, namely the essay, the novel, the short story, theater, and zarzuelas. These essays cover canonical authors such as Benito Pérez Galdós and Emilia Pardo Bazán, and understudied female authors such as Rosario de Acuña and Belén Sárraga. The authors included here study this dynamic in a variety of genres and venues, namely the essay, the novel, the short story, theater, and zarzuelas. The volume builds on recent scholarship on race, class, gender, and nation by focusing specifically on the intersections of these categories, and by studying this dynamic in popular culture, visual culture, and in the works of both canonical and lesser-known authors.

It must be acknowledged that any solutions to anthropogenic Global Climate Change (GCC) are interdependent and ultimately inseparable from both its causes and consequences. As a result, limited analyses must be abandoned in favour of intersectional theories and practices. Emergent Possibilities for Global Sustainability is an interdisciplinary collection which addresses global climate change and sustainability by engaging with the issues of race, gender, and class through an intersectional lens. The book challenges readers to foster new theoretical and practical linkages and to think beyond the traditional, and oftentimes reductionist, environmental science frame by examining issues within their turbulent political, cultural and personal landscapes. Through a variety of media and writing styles, this collection is unique in its presentation of a complex and integrated analysis of global climate change and its implications. Its companion book, Systemic Crises of Global Climate Change, addresses the social and ecological urgency surrounding climate change and the need to use intersectionality in both theory and practice. This book is a valuable resource for academics, researchers and both undergraduate and post-graduate students in the areas of Environmental Studies, Climate Change, Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC.

Blea's holistic approach looks at academic studies on race, class, and gender and the social situation of La Chicana--a minority female whose life is influenced by racism and sexism. The wide-ranging text focuses on the history of La Chicana, considering her socialization process and the consequences of deviating from gender roles. Current social problems and the evolution of Hispanic women onto the national scene in politics, economics, criminal justice and more are detailed. The book concludes with an exploration of new directions in the study of Chicanas.

Presumed Incompetent is a pathbreaking account of the intersecting roles of race, gender, and class in the working lives of women faculty of color. Through personal narratives and qualitative empirical studies, more than 40 authors expose the daunting challenges faced by academic women of color as they navigate the often hostile terrain of higher education, including hiring, promotion, tenure, and relations with students, colleagues, and administrators. The narratives are filled with wit, wisdom, and concrete recommendations, and provide a window into the struggles of professional women in a racially stratified but increasingly multicultural America.

It is well known that Latinos in the United States bear a disproportionate burden of low educational attainment, high residential segregation, and low visibility in the national political landscape. In Latinos in American Society, Ruth Enid Zambrana brings together the latest research on Latinos in the United States to demonstrate how national origin, age, gender, socioeconomic status, and education affect the well-being of families and individuals. By mapping out how these factors result in economic, social, and political disadvantage, Zambrana challenges the widespread negative perceptions of Latinos in America and the single story of Latinos in the United States as a monolithic group. Synthesizing an increasingly substantial body of social science research—much of it emerging from the interdisciplinary fields of Chicano studies, U.S. Latino studies, critical race studies, and family studies—the author adopts an intersectional "social inequality lens" as a means for understanding the broader sociopolitical dynamics of the Latino family, considering ethnic subgroup diversity, community context, institutional practices, and their intersections with family processes and well-being. Zambrana, a leading expert on Latino populations in America, demonstrates the value of this approach for capturing the contemporary complexity of and transitions within diverse U.S. Latino families and communities. This book offers the most up-to-date portrait we have of Latinos in America today.

Intersectionality, or the consideration of race, class, and gender, is one of the prominent contemporary theoretical contributions made by scholars in the field of women's studies that now broadly extends across the humanities, social sciences, and natural sciences. Taking stock of this transformative paradigm, The Intersectional Approach guides new and established researchers to engage in a critical reflection about the broad adoption of intersectionality that constitutes what the editors call a new "social literacy" for scholars. In eighteen essays, contributors examine various topics of interest to students and researchers from a feminist perspective as well as through their respective disciplines, looking specifically at gender inequalities related to globalization, health, motherhood, sexuality, body image, and aging. Together, these essays provide a critical overview of the paradigm, highlight new theoretical and methodological advances, and make a strong case for the continued use of the intersectional approach both within the borders of women's and gender studies and beyond.
