Genetic Variation In Solanum
The evolutionary history of Solanum genomes has also been investigated from the perspective of chromosome organization. The study by Szinay et al. involving cross-species BAC FISH painting of Solanum species revealed few large rearrangements in the short arm euchromatin of chromosomes 6, 7 and 12, whereas Anderson et al.*

Genetic Variation In Solanum - orrisrestaurant.com

Tomato (Solanum lycopersicum L.) is an economically important vegetable crop worldwide and a pre-eminent plant genetic analysis system. Genetic marker development for tomato has been conducted over 30 years through various approaches, including restriction fragment length polymorphism (RFLP), random amplified polymorphic DNA (RAPD), amplified fragment length polymorphisms (AFLPs), simple sequence repeat (SSR), cleaved amplified polymorphisms (CAPs), and conserved ortholog sets (COSs).

Eight Bulgarian accessions were studied: variety Plovdivska karotina of a Solanum chillense background, variety IZK Alya (cherry type) of a Solanum pimpinellifolium background and six tomato breeding lines (L21B, L53B, L1140, L1116, L975, L984) from the Maritza Institute of Vegetable Crops (Plovdiv, Bulgaria). Each genotype was presented by seven individual plants.

Assessment of genetic variation in Bulgarian tomato ...

Genebanks seek to understand the partitioning of genetic diversity among species, populations, and individuals in their collections since this informs decisions for adopting the most effective sampling strategy. Recent reports have suggested that diploid wild species have much less heterogeneity within populations than cultivated forms. We here review past empirical phenotypic trait variation ...

Three hundred and eighty genotypes of tomato were investigated for genetic diversity for nine seedling traits and considerable genetic variation was observed for all the traits except pubescence. Only two genotypes (19901 and 6836-9) were glabrous, whereas all others had hair on the hypocotyl.

Genetic Divergence for Seedling Traits in Tomato (Solanum ...

Considering that genetic variation between the tomato reference genome *S. lycopersicum* and *S. pimpinellifolium* is larger than genetic variation within *S. lycopersicum*, mapping parameters were set as 0.5 for the length fraction and 0.9 for the similarity fraction. The reads of the same individual in different lanes were merged.

The objective of this work was to genetically analyze somaclonal variants and gamma induced mutants of potato (*Solanum tuberosum* L.) cv. Diamant using RAPD-PCR technique. In the present work, callus was induced from nodes, internodes and leaf explants in MS medium supplemented with NAA (1.0 mg/l) and BAP (0.5 mg/l) and plants were regenerated from 14-20 weeks old calli.
