An illustrated history of the sea tragedy recounts the life of the ship from its construction to the discovery and exploration of its wreckage

Man ' s quest for speed is driven by two ambitions. One is the competitive urge to excel — to go as fast as possible by any available means, and preferably to go faster than anybody else. The other, more practical, aim is to make travel and transport as swift and efficient as possible. The two are closely linked, since by pushing technology to the limit to achieve the first, we improve performance in the second, with results that continue to shrink the world.In this book Peter Gosling tells the fascinating story of the key scientific discoveries and technological breakthroughs in our drive to conquer distance— from our earliest crude efforts using animal power and the wheel, to harnessing the wind and the waves, on through the watershed of the Industrial Revolution, rail and steam, the invention of the internal combustion engine, through powered flight to rocketry, and on to space travel. We look at developments on land, sea, and air, and the novel " green " solutions that scientists are exploring in order to meet today ' s environmental challenges. Along the way we meet some of the remarkable men and women behind these breakthroughs, whose vision and determination have helped to shape the modern world. Written in an engaging, non-technical style, The Quest for Speed captures both the thrill of the race and the adventure of science, and points to the social and cultural changes ahead as technology accelerates the pace of life and transforms the human landscapeSIMPLE GUIDES: SCIENCESimple Guides: Science are user-friendly introductions to the great scientific discoveries of the world. Written by experts in the field, they offer the general reader simple and engaging descriptions of key developments and breakthroughs in different fields of science and technology. • Simple Guides: Science are written in a clear, informal style, using plain, non-technical language to provide accessible introductions to complex scientific theories • Organized both by theme and chronologically, the books link the major breakthroughs to the lives of their discoverers and inventors. • The clear structure and design enable the general reader to grasp essentials easily. • These guides will appeal to readers with no specific scientific knowledge, yet with a thirst to know more about the world we live in • The scientific developments and theories are brought to life by descriptions of their social contexts; not only the breakthroughs are described, but also their impact on society and the human story behind the scientists.

The Triumph Stag was a two-door, four-seat, luxury touring car, designed to be Triumph's flagship model for the 1970s. Styled by prolific designer Giovanni Michelotti, and engineered by Harry Webster and Spen King, the Stag had no direct competitors throughout its production life and was the blueprint for the many four-seat convertibles on the market today. It was in production from 1970 through to 1977, but suffered from a lack of development and gained a reputation for engine problems caused by poor cooling. Triumph Stag - An Enthusiast's Guide explores the history, design and development of the car, taking a special look at the Stag's unique Triumph V8 engine - and how Stag owners today have largely solved the cooling problems. It also covers owners' experiences, specialist modifications and improvements, and the car clubs that help the Stag remain one of the most popular classic cars in the UK. Superbly illustrated with 121 colour photographs.

This carefully researched account of a lesser-known but vital aspect of the American war for independence chronicles exciting ship-to-ship battles, Benedict Arnold's efforts to build a fleet in Lake Champlain, the harassment of British ships by privateers, David Bushnell's "sub-marine" vessel and floating mines, uniforms, and much more. More than 150 black-and-white illustrations.

The Mirror dinghy was a significant factor in the boom of dinghy sailing in the 1960s, introducing thousands to the delights of sailing. While sailing has come a long way since then and there have been a lot of far more exotic craft launched, the Mirror remains a fantastic boat in which to learn to sail and to compete at the highest levels. With this second edition, The Mirror Book has been bought into the Start to Finish series format alongside such revered books as The Laser Book, The Topper Book, The Catamaran Book and The Foiling Dinghy Book. Like these titles, this book tells you everything you need to know about sailing the boat (whether it be the original gaff-rigged boat or has the newer Bermuda rig). Written for those starting out through to those striving to win a championship, the book is packed with practical advice and illustrated with step-by-step photographs. It covers: setting up the Mirror and early sailing experiences; developing skills on all points of sailing and with the spinnaker; racing & masterclasses to become a championship winner. Over 180 photographs show you exactly how it ' s done, and 72 diagrams illustrate key boat parts, the different points of sailing and complex on-the-water scenarios with clarity. It is written by Peter Aitken, formerly the UK National Mirror Coach, who has coached teams to win world championships in the Mirror, Cadet and 420 classes, and Tim Davison, a successful racer and author of countless books on sailing. The UK Mirror Class Association have contributed to this update and it is endorsed by Dave Wade, double Mirror National Champion, who says: " Armed with this book, your understanding of Mirror sailing techniques will grow, and your results will improve. I thoroughly recommend it. "
