Starting with IBM WebSphere Application Server V8.0, the product's installation factory has changed to use the IBM Installation Manager. The IBM Installation Manager does not provide a GUI interface for the IBM i. Because of this, it can be a bit complex to install and manage the IBM WebSphere Application Server product on the IBM i.

[How To Install an IBM WebSphere Application Server \(WAS\) ...](#)

WebSphere Application Server is a software product that performs the role of a web application server. More specifically, it is a software framework and middleware that hosts Java-based web applications. It is the flagship product within IBM's WebSphere software suite. It was initially created by Donald F. Ferguson, who later became CTO of Software for Dell. The first version was launched in 1998. This project was an offshoot from IBM HTTP Server team starting with Domino Go.

[IBM WebSphere Application Server - Wikipedia](#)

The sample application uses a Policy Set that is not installed in IBM WebSphere Application Server and IBM Rational Application Developer by default, so it must be imported into both of them first. Then the sample application EAR file can be imported into the IBM Rational Application Developer workspace and started on the Server that was created in the previous section.
