This compelling account of how technology and development affect indigenous peoples throughout the world provides a provocative context in which students can think about civilization and its costs.

Victims of Progress, now in its sixth edition, offers a compelling account of how technology and development affect indigenous peoples throughout the world. Bodley 's expansive look at the struggle between small-scale indigenous societies, and the colonists and corporate developers who have infringed their territories reaches from 1800 into today. He examines major issues of intervention such as social engineering, economic development, self-determination, health and disease, global warming, and ecocide. Small-scale societies, Bodley convincingly demonstrates, have survived by organizing politically to defend their basic human rights. Providing a provocative context in which to think about civilization and its costs—shedding light on how we are all victims of progress—the sixth edition features expanded discussion of "uprising politics," Tebteba (a particularly active indigenous organization), and voluntary isolation. A wholly new chapter devotes full coverage to the costs of global warming to indigenous peoples in the Pacific and the Arctic. Finally, new appendixes guide readers to recent protest petitions as well as online resources and videos.

Cultural Anthropology provides students with the anthropological tools to question and understand their own culture and the world. Key updates for the sixth edition include a shorter length and more streamlined focus, China and Hindu South Asia combined into a single chapter, a new chapter assessing imperialism and the breakdown of states, and more.

Bodley trenchantly critiques the most pressing global mega-problems, such as unsustainable growth, resource depletion, global warming, and poverty and conflict, and shows how anthropology makes it possible to find solutions.

Eminent anthropologist John H. Bodley spotlights successful small nations as models of how to address the contemporary global problems of poverty, conflict, and environmental degradation.

An insider 's view of science reveals why many scientific results cannot be relied upon — and how the system can be reformed. Science is how we understand the world. Yet failures in peer review and mistakes in statistics have rendered a shocking number of scientific studies useless — or, worse, badly misleading. Such errors have distorted our knowledge in fields as wide-ranging as medicine, physics, nutrition, education, genetics, economics, and the search for extraterrestrial life. As Science Fictions makes clear, the current system of research funding and publication not only fails to safeguard us from blunders but actively encourages bad science — with sometimes deadly consequences. Stuart Ritchie 's own work challenging an infamous psychology experiment helped spark what is now widely known as the "replication crisis," the realization that supposed scientific truths are often just plain wrong. Now, he reveals the very human biases, misunderstandings, and deceptions that undermine the scientific endeavor: from contamination in science labs to the secret vaults of failed studies that nobody gets to see; from outright cheating with fake data to the more common, but still ruinous, temptation to exaggerate mediocre results for a shot at scientific fame. Yet Science Fictions is far from a counsel of despair. Rather, it 's a defense of the scientific method against the pressures and perverse incentives that lead scientists to bend the rules. By illustrating the many ways that scientists go wrong, Ritchie gives us the knowledge we need to spot dubious research and points the way to reforms that could make science trustworthy once again.

Who decides which stories about a city are remembered? How do interpretations of the past shape a city 's present and future? Using local, national and international perspectives on the meanings and uses of heritage cities, The Politics of Memory: Urban Cultural Heritage in Brazil explores how a site can turn into a mummification of the past, lifelessly displaying long-gone splendour, or a living, breathing treasure offering dynamic cultural and educational opportunities. This book presents multiple and competing views, needs and desires amongst the different people who use a city, alongside notions of power, national identity, race and class in heritage settings. Discussing the case of UNESCO World Heritage town Ouro Preto in Brazil, Andreza Aruska de Souza Santos asks how and why democratic participation in heritage fails or succeeds, and how preserved historic cities interpret, resist, and consent to the functions and meanings that they have inherited and that they reinvent for themselves.

"The book provides an overview of existing theoretical discussions and field research on the role of digital technology, the internet, and social media in social transformations, civic culture, and protests"--

This introductory text introduces basic concepts in cultural anthropology by comparing cultures of increasing scale and focusing on specific universal issues throughout human history. It uniquely challenges students to consider the big questions about the nature of cultural systems.
